Subject: Application – DEEPNN2025 – Junior Deep Learning R&D Engineer

Dear NERD Team,

I am writing to express my interest in the Junior Deep Learning R&D Engineer position (DEEPNN2025) at Nintendo European Research & Development. As a passionate AI engineer with a recent Master's degree in Artificial Intelligence from Artois University (France), I am eager to contribute to innovative projects combining deep learning, computer vision, and embedded systems.

During my recent experience at CNRS, I worked on predictive modeling and pattern mining for ligand/receptor pair identification, using advanced machine learning techniques. I also developed deep learning systems for image recognition, including fine-grained classification and object detection (YOLO, Keras, TensorFlow). My current personal project, RecruitPME, is an AI-powered recruitment platform where I combined NLP, Python, and Spring Boot to build an end-to-end smart CV matching system.

I enjoy learning fast, experimenting iteratively, and translating ideas into working prototypes. I am comfortable with PyTorch, TensorFlow, and scientific tools such as NumPy, Scikit-learn, and OpenCV. My academic and personal projects reflect a strong focus on reproducibility, code quality, and collaboration.

Joining NERD would be an exciting opportunity to contribute to impactful technologies at scale, alongside a talented international team. I am motivated by the creative spirit of Nintendo and would be proud to participate in building joyful and innovative user experiences.

Thank you for considering my application. I would be happy to discuss how my skills and background align with your goals.

Best regards,

Ayoub Boukaibat
